

EDUCATION

Bachelor of Engineering

March 2022 - February 2027(expected)

Sookmyung Women's University, Seoul, Republic of Korea

- Major: IT Engineering / Double Major: Big Data Engineering / GPA: 4.0/4.3 (4.3/4.5)

SKILLS & LANGUAGES

- **Languages** : English (OPic : IH, May 2025), Korean (Native)
- **AI & Machine Learning** : Generative AI (Diffusion, LLMs), RAG, Multi-modal Learning, Prompt Engineering
- **Tech Stack & Tools** : Python, PyTorch, LangChain, LangGraph, React, SQL, TensorRT, vLLM, LmDeploy

WORK EXPERIENCE

Image Vision Team Intern | NAVER Cloud

July 2025 - December 2025

Evaluation Metric Development & Pipeline Optimization

- Proposed a novel evaluation metric 'Depth CFD' by identifying structural limitations in the existing Contextual Feature Distance (CFD), enabling more accurate detection of hallucination artifacts.
- Conducted comparative performance analysis on object removal models by applying mask augmentation to evaluate its impact on training dynamics and output quality.
- Surveyed state-of-the-art evaluation metrics across recent literature and built a unified evaluation pipeline reproducing paper-level implementations, enabling systematic comparison across object removal models.
- Benchmarked multiple captioning models quantitatively to identify the most efficient option, then built and integrated a captioning pipeline into the existing model pipeline using vLLM/LmDeploy, achieving a 10% speedup via TensorRT.

Database Documentation & Standardization Intern | ST Co., Ltd.

March 2025 - June 2025

AI-Powered DB Entity & Table Name Standardization Pipeline

- Designed an **AI-powered RAG pipeline** (OpenAI API, FAISS) to batch standardize DB terminology and auto-detect typos, reducing **4 months of manual workload to 2 days**.
- Established a docs-as-code pipeline by authoring a Markdown-based guide and building an auto-sync script for the team Wiki to ensure consistent reference.

Intelligent Devices and Simulation Laboratory Intern | ETRI

July 2024 - August 2024

RAG-based Code Knowledge Base Construction & LLM Prompt Engineering

- Constructed a large-scale knowledge base by crawling **over 100,000 LeetCode solutions**, executing automated tests to validate and preprocess the dataset.
- Analyzed LLM code generation errors and developed targeted prompt engineering strategies to improve code accuracy for specific error types.

Undergraduate Research Assistant | SSSLab, Sookmyung Women's University

September 2024 - December 2024

Real-Time Stock QA System for the Visually Impaired

- Engineered a **retrieval-augmented generation (RAG) system** utilizing **Llama-3, LangChain, Ollama**, and external APIs (Naver News, Korea Investment Securities) to provide quantitative investment analysis.
- Optimized data processing efficiency by implementing a similarity detection mechanism using **FAISS**, bypassing redundant web crawling for queries with over 90% similarity.

International Scholar | Purdue University, West Lafayette, IN, USA

March 2024 - June 2024

Facial Attribute Editing & Control using Multi-Modal DiT

- Developed a multi-modal editing framework on Diffusion Transformers (DiT) that enables simultaneous control of semantic attributes and geometric structure by unifying Prompt-to-Prompt and MasaCtrl.
- Engineered the text-driven editing module by adapting U-Net-based Cross-Attention Control to the DiT architecture via runtime method replacement, featuring an automated masking pipeline for precise local editing while enforcing structural constraints to preserve source identity with high fidelity.

PROJECTS

Wehas : Multi-Agent AI Wedding Planner System

March 2026 - Present

- Developed a **LangGraph-based multi-agent AI** to automate wedding logistics (e.g., venue recommendation, reservation), architecting the end-to-end data flow to translate user requirements into practical business solutions.
